

Brief for Cats4Lyf.co.uk

So I have totally made up cats4lyf.co.uk but what I want you to do is make an ecommerce site where you can “buy” cats!

You need to create a site that fulfills the following requirements:

- Product (cat) images come from an API (<https://thecatapi.com/>) (<https://api.thecatapi.com/v1/images/search>)
- Display page of products (cats) with images for each from api ^ (product landing page)
- Ability to add each product (cat) to the basket (<https://www.npmjs.com/package/faker> is create for making fake data to pad out the info on a product)
- Ability to remove an item (cat) from the basket
- Calculate total price of the items (pets) in the basket
- Basket needs to be a side panel or a modal that is displayed when you press the basket button

Styling, branding, colours etc are completely up to you! Have fun and get creative but make sure that you don't spend too much time on this because the functionality of the site must come first

Bonus requirements if you have time to push the boat out:

- Using react router, each product (pet) should have its own page with information about each one (you can make this up and have it randomised quite easily - talk to me if have a q about it)
- A checkout page where you “buy” the items (pets) in the basket
